National Comorbidity Survey: Reinterview (NCS-2), 2001-2002

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

M1: Have changes in behavior at time of mania

Earlier in the interview you mentioned having a time lasting several days or longer when you (IF SC90 EQUALS "1": were so happy or excited that you either got into trouble, your family or friends worried, or a doctor said you were manic / ALL OTHERS: felt much more excited and full of energy than usual and your mind went too fast). (READ SLOWLY) People who have episodes like this often have changes in their thinking and behavior at the same time, like being more talkative, needing very little sleep, being very restless, going on buying sprees, and behaving in ways they would normally think are inappropriate. Did you ever have any of these changes during your episodes of being (IF SC90 EQUALS "1": happy or excited / ALL OTHERS: excited and full of energy)?

PD8: Describe the situation of the attack

Attacks of this sort can occur in three different situations. The first are when the attacks occur unexpectedly "out of the blue". The second are when a person has an unreasonably strong fear. For example, some people have a terrible fear of bugs or of heights or of being in a crowd. The third are when a person is in real danger, like a car accident or a bank robbery.

Which of these three describes your attack - did it occur unexpectedly "out of the blue", in a situation that you strongly fear, or in a situation of real danger?

IF R THOUGHT THERE WAS REAL DANGER EVEN THOUGH IT TURNED OUT NOT TO BE DANGEROUS, CODE

"REAL DANGER".

PD17: Attack occurred "out of the blue"

Attacks of this sort can occur in three different situations. The first are when the attacks occur unexpectedly "out of the blue". The second are when a person has an

unreasonably strong fear. For example, some people have a terrible fear of bugs or of heights or of being in a crowd. The third are when a person is in real danger, like a car accident or a bank robbery.

The next question is about how many of your attacks occurred in each of these three kinds of situations. Did you ever have an attack that occurred unexpectedly "out of the blue"?

FN2INTR1: Personal income in the past 12 months before taxes

The next questions are about the different sources of income you may have. For each question, please tell me the letter you see on page 23 in your booklet that represents your own personal earnings income in the past 12 months, before taxes. Count only wages and other stipends from your own employment, not pensions, investments, or other financial assistance or income. (Your best estimate is fine.)

DA37: Rung on ladder where you stand in life compared to others (Country)

Think of this ladder as representing where people stand in the United States.

At the top of the ladder are the people who are the best off - those who have the most money, the most education and the most respected jobs. At the bottom are the people who are the worst off - who have the least money, least education, and the least respected jobs or no job. The higher up you are on the ladder, the closer you are to the people at the very top; the lower you are, the closer you are to the people at the very bottom.

Please circle the number next to the rung where you think you stand at this time in your life, relative to other people in the (COUNTRY OF INTERVIEW).
